

## Purchashing Video Tapes

### **Player and Monitor Equipment**

Most video tapes described on the following pages were made during lectures presented in training courses given at the Hydrologic Engineering Center (HEC). No editing or enhancements have been added to the recording. The tapes conform to standard EIA (Electronics Industry Association) TV signals and are 1/2-inch VHS cartridges.

Non-Corps offices and foreign countries may purchase video tapes through an independent contractor (Corps offices receive the tapes free of charge). An order form is provided. Power supplies vary in foreign countries, thus, the 110 - 120 AC required for U.S. equipment may not be available. Converters are available from most equipment manufacturers. Also most video tape players will not be compatible with monitors manufactures in other countries and vice versa. For this reason it is advisable that player, monitor, and tapes all be manufactured to U.S. standards.

### **Tape Descriptions**

In the tape descriptions which follow, the lecturer, year in which the tape was made, color or black and white (b/w), and playing time are identified.

### **Support Materials**

A copy of the lecture outline and any handout material used during the lecture are supplied with each tape, if available.

### **Copy Video Tapes**

There is no restriction on the duplication of the tapes provided. Permission is granted to any person to copy the HEC tapes for their personal use.

VIDEO TAPE CATALOG**

Table of Contents

	<u>Page</u>
<b>Dam-Break Analysis</b>	
Characteristics of Dam-Break Floods .....	1
Computer Program DAMBRK .....	1
<b>Data Storage System</b> .....	2
<b>Flood Hydrograph Analysis</b>	
Computer Program HEC-1 .....	4
Flood Forecasting .....	5
Flood Routing .....	6
Hydrographic Analysis .....	6
Hypothetical Storms .....	7
Kinematic Wave .....	7
<b>Flood Warning-Preparedness</b> .....	8
<b>Groundwater Hydrology</b>	
Groundwater Management .....	10
Groundwater Modeling .....	10
Methods of Analysis .....	11
Principles of Groundwater .....	11
<b>Hydropower</b>	
Computer Program HEC-5 .....	13
<b>Interior Flooding Hydrology</b>	
Basic Concepts .....	14
Case Studies .....	14
Procedures .....	14
<b>Nonstructural Planning</b> .....	16
<b>Real-Time Water Control</b>	
Data Acquisition .....	17
Data Storage System .....	17
Reservoir Simulation .....	18
Streamflow Forecasting .....	19

## Table of Contents (continued)

	<u>Page</u>
<b>Reservoir System Analysis</b>	
Basic Concepts .....	20
Computer Program HEC-5 .....	20
Flood Control Using HEC-5 .....	21
Water Supply Using HEC-5 .....	21
<b>Risk-based Analysis</b> .....	22
<b>River Hydraulics</b>	
Computer Program HEC-2 .....	25
Computer Program HEC-RAS .....	26
Unsteady Flow - DWOPER .....	27
Unsteady Flow - UNET .....	28
Water Surface Profile Computations .....	29
2-D Modeling .....	30
<b>Sediment Transport</b>	
Case Studies .....	31
Computer Program HEC-6 .....	31
Navigation Requirements .....	32
Principles and Methods .....	33
Procedures to Conduct a Sediment Study .....	35
Reservoir Sedimentation .....	35
Scour .....	35
<b>Spatial Data Management</b> .....	36
<b>Statistical Methods</b>	
Computer Program STATS .....	37
Flood Frequency Analysis .....	37
Regional Analysis .....	38
<b>Urban Hydrology</b>	
Effects of Urbanization .....	40
Methods of Analysis .....	40
<b>Water Quality</b>	
Water Quality Using HEC-5Q .....	41

Table of Contents (continued)
